

#### 5-PORT GIGABIT SWITCH

Model EGN-SG5 **OWNERS GUIDE** 

#YourGearUpgraded

"That's more than 4"

"Wanna show off your hard work? Share a picture of your completed project with **#YourGearUpgraded**. Who knows, it might not be as bad as you thought

#### **Position The Switch**

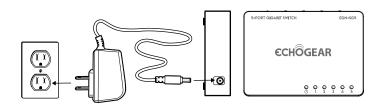

"find some shade"

- Install the switch in a stable/safe place to avoid any possible damage.
- · Avoid placement in direct sunlight.
- Do not place heavy articles on the switch.
- Ensure there is adequate space for proper heat dissipation and ventilation around the switch.

## **Power Up**

Connect the AC power adapter to an outlet, then to the switch.

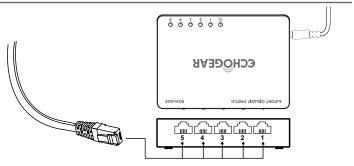

**A** CAUTION: ONLY use the included power supply. If a different power supply is used, it could damage the EGN-SG5.

### **Connect Your Stuff**

Use standard Ethernet cable to connect the EGN-SG5 to your LAN (Ethernet) devices.

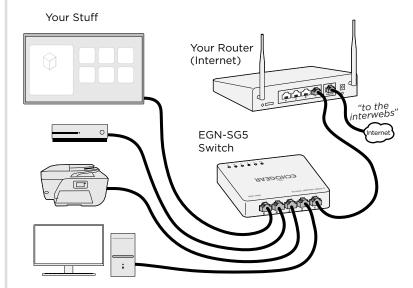

TIP: We recommend at least Cat-5e unshielded twisted pair (CAT5e UTP) cabling. To ensure best performance and stable data transmission at 1000 Mbps, use Category-6 unshielded twisted pair (CAT6 UTP).

Connect your LAN devices to the switch, then connect the switch to your router's LAN port.

TIP: You can connect two switches together, "buy more stuff" to gain even more space.

When properly connected, the Link/Activity LED for that port, lights up GREEN. Refer to STEP 4 for definitions and troubleshooting.

# **LED Indicators**

The LED indicators include (1) one Power indicator and (5) five Link/Activity indicators. These LED indicators show the operating status of the EGN-SG5 and each switch connection. See Table.

LED	Color	Status	Description
Power	Green	On	The switch is powered.
Ф		Off	The switch is unpowered. Check the DC power supply to ensure proper connection to the outlet and switch.
Link/ Activity	Green	On	The switch is connected to an Ethernet device.
		Blinking	The switch is transmitting/receiving data.
1,2,3,4,5		Off	Indicates the port is not connected to an Ethernet device.
